Specializing in Commercial HVAC Systems on the West Coast

## Variable Refrigerant Flow Technology and Mitsubishi - A Winning Combination

### MITSUBISHI

- Number One Selling VRF Product in the United States. Over 42% market share.
- Two pipe design-----less piping, less wiring, and 2/3 less refrigerant connections than three pipe systems.
- Free “Diamond Designer” training for design professionals, contractors and installers-resulting in additional warranty extensions at no cost to the owner.
- All products, parts and controls are stocked in Atlanta, Georgia resulting in a two day ship cycle. Other applied products have up to 14 week lead times.
- Mega-training facility in Orlando, Florida for installers, contractors and controls training. Every product in the Mitsubishi HVAC line is **installed** and **running** for viewing and “hands on” training.
- Inverter technology to maintain optimum comfort and efficiency. Coupled with DOAS units, the room temperature can be raised up to 5 degrees with no loss in comfort. Zoning ability and a true energy saver.

Slade Ross engineers are here to work with you. We have local projects and can provide site visits, training, selections or lunch and learns about the Mitsubishi product and our extensive DOAS systems options to compliment the VRF.

Our graduate engineers and systems experts are available for a presentation. Please call or email one of the representatives below to set up an appointment
